

American Drainage Systems, Inc.

**AMERICAS' NEW ANSWER TO SOIL CONSOLIDATIONS
LEADING THE WICK DRAIN INDUSTRY INTO THE 21ST CENTURY**

EQUIPMENT

At A.D.S. we use the newest patented technology in the world. Our equipment will and has proven itself by installing millions of feet of wick drain from depths from 60 feet up to 150 feet, and we can do any depth necessary.

Our equipment is statically driven as well as vibratory adapted to give us the ability to provide the most powerful wick rig in the United States.

The equipment delivers an unmatched 500 ton per square foot of driving force, combining static and dynamic forces to penetrate the stiff underlying strata eliminating the need to auger or drill in most soil conditions.

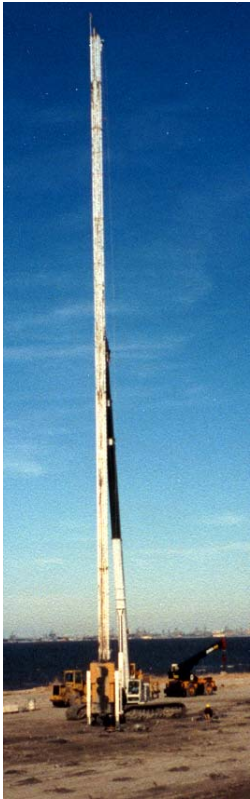

Our equipment is new and unlike others', our downtime is an absolute minimum.

American Drainage Systems, Inc.

LEADING THE WICK DRAIN INDUSTRY INTO THE 21ST CENTURY

EQUIPMENT CONTINUED

A.D.S. has experience in designing equipment and installing wick drain to depths of up to 260 ft. A.D.S. has also installed wick drain in all types of soil conditions.

A.D.S.'s equipment has versatility that is matched by no other contractor in the wick drain industry. This allows site-to-site mobilization to be hasty and efficient, enabling A.D.S. to spend more time on installing drain vs. mobilization, repair, and setup of equipment.

A.D.S. also uses the latest proactive planning techniques to ensure that all parties of the construction process work together to produce the highest level of installation available. We become highly involved in all predecessor wick activities to ensure that owners, general contractors and/or other subcontractors receive a quality product in an efficient time frame.
